

## PROFILE

A resourceful Full Stack Developer that can work effectively within a team or individually to achieve tasks in a remote environment and is interested in opportunities for technical growth and improvement.

## SKILLS & TECHNOLOGIES

- TypeScript
- GraphQL
- GitHub & BitBucket
- ReactJS
- AWS Amplify
- Jira
- React Native - IOS/Android
- NodeJS
- Agile

## EXPERIENCE

### REMOTE FULL STACK DEVELOPER, GRAVOC

MAY 2022 - PRESENT

- Develop clean reusable solutions in Typescript, React Native, or Javascript depending on the project's framework.
- Create pure functions that only aim to complete one task to make code readable and avoid any unintended side effects.
- Test solutions thoroughly using IOS or Android simulator or via the web to ensure the feature or bug fix is working as expected, and that it provides an intuitive user experience.
- Resolve bugs in a timely manner and improve broken code using best coding practices whenever possible.
- Use numerous AWS tools including AWS Lambdas, AWS SES/SNS, AWS Cloudwatch, AWS API Gateway, and AWS DynamoDB in order to provide reliable and scalable solutions for the client's software.
- Regularly work with other full-stack developers to gain better insight into backend and cloud development. This includes updating GraphQL schemas and creating, deploying, and testing AWS Lambdas using the AWS CLI or web console.
- Utilized AWS SES and SNS for one project to send out automated email and SMS messages to their user base. Also added multiple layers of security by checking the user's date of birth and dynamically creating unique tokens that are used when querying or mutating user notification settings.
- Designed and created a cost-savings calculator to compare costs against competitors for a client using Vanilla JS, HTML, and CSS. Regularly met with the client to demo development progress and record customer feedback.

### FRONT END SOFTWARE DEVELOPER, C SQUARED SYSTEMS

AUGUST 2021 - MAY 2022

- Managed and maintained user role permissions project that is utilized by C Squared Systems' larger software application.
- Refactored and developed TypeScript code with clean solutions on a large-scale application to ensure product scalability.

- Collaborated with senior software developers to address and resolve urgent bugs in different customer environments - resolved over 50 high-priority bugs in 3 month period.
- Produced accurate time frame estimates to complete Jira tasks as well as provided task updates to the team and my supervisor.
- Confirmed all unit tests pass on code alterations to create reliable customer-facing software.
- Reviewed code for logical errors and readability issues with fellow developers.
- Worked efficiently as part of a team or individually to complete tasks.

#### REMOTE FULL STACK DEVELOPER, BLACKBURN LABS

JULY 2020 - JULY 2021

- Designed, developed, and tested new features for multiple React applications, both internal and external facing, using NodeJS as the backend environment
- Apply Object Oriented concepts and principles to software development
- Attended daily Agile scrum meetings and provided progress updates to my supervisor

#### RELEVANT TRAINING

- AWS Cloud Practitioner
- PluralSight Typescript
- PluralSight SQL

#### EDUCATION

Southern New Hampshire University, Manchester, NH – B.S in Computer Science, 2021
